Description

The product contains the polyhedrin protein co-crystallized with Human Ephrin-A1. Ephrin-A1 is a member of Ephrin-A family, and it is also known as B61 and LERK-1. Ephrin-A ligands are structurally related to the extracellular domains of the transmembrane Ephrin-B ligands. Eph-Ephrin interactions are widely involved in the regulation of cell migration, tissue morphogenesis, and cancer progression. Ephrin-A1 is widely expressed on endothelial and epithelial cells, particularly in the lung, intestine, liver, and skin.

Usage Recommendation

PODS® co-crystals provide a depot of proteins which are steadily secreted. It has been estimated that the biological activity of 50 million PODS® co-crystals generates the same peak dose as 3.3 µg of standard recombinant protein. However, at 5 days following the start of seeding the PODS® co-crystals, there are more than 50% of these peak levels still present in the culture system. Ultimately, the amount of PODS® co-crystals that is optimal for a particular experiment should be determined empirically. Based on previous data, we suggest using 50 million PODS® co-crystals in place of 3.3 µg of standard growth factor as a starting point. To control for cross-reactivity with cells or as a negative control, we recommend using PODS® growth factors alongside <a href="http://www.cellgs.com/products/podsandempty.html">PODS® Empty crystals</a>, as the latter do not contain or release cargo protein.

Specifications

Alternative Names EphrinA1, ECKLG, EFL1, EFL-1, EFNA1, EPH-related receptor tyrosine kinase ligand 1, immediate early response protein B61, B61, LERK1,LERK-1, ligand of eph-related kinase 1, TNFAIP4B61, tumor necrosis factor alpha-induced protein 4, EPLG1TNF alpha-induced

Endotoxin Level <0.06 EU/ml as measured by gel clot LAL assay

Formulation PODS® were lyophilized from a volatile solution

AA Sequence

Preparation and Storage

Reconstitution PODS® co-crystals may be reconstituted at 200 million co-crystals/ml in water. 20% glucose has a buoyant density closer to PODS® co-crystals and can be useful for aliquoting. PODS® co-crystals are highly stable when stored in aqueous solution (pH range 6 - 8).

Stability and Storage Upon receipt, store at 4°C. PODS® co-crystals are stable for at least 1 year when dry and 6 months when resuspended.
